

PUBLIC LAUNCH RAMP

The King Harbor Boater's Advisory Panel has consistently recommended that the City develop and build a safe and usable Public Launch Ramp, with access to the South Turning Basin.

Such a facility was integrated into both of the community vision plans: the Village Plan and the Heart Park Plan.

The KHBAP has coordinated with various stakeholders, in the harbor area, to conduct research into potential configurations and locations for the Public Boat Launching Facility.

A well-designed launch facility will comply with the spirit of the Coastal Commission concept of public access, provide community recreation for our citizens, and support the harbor area economy.

The KHBAP will provide supporting documents and comments, in support of our recommendation for a Public Launch Ramp, during the City Council meeting of December 13, 2005.
